

## Participate in the Peak Demand Management to earn rewards

Apply Now

Peak Demand Management programme aims to encourage business customers<sup>#</sup> to reduce electricity consumption during Peak Demand Hours by offering incentives. Customers reduce their electricity usage during Peak Demand Hours by implementing specific energy saving measures to earn incentive and also support Peak Demand Management.

CLP Account Managers will hold discussion with business customers to understand their daily electricity usage patterns and formulate various demand reduction solutions. Then business customers can register for the programme by submitting application form. The incentive rates are set out according to the notification lead time, as shown here:

Notification lead time	Incentive rate (per each kWh reduction)
≥ 24 hours prior to the event	HK\$10
≥ 4 hours but < 24 hours prior to the event	HK\$15

After receiving notification of Peak Demand Hours from CLP, participating customers can implement measures to reduce electricity consumption during the specified hours. The less electricity they use, the more rewards they can earn in return. Customers will also receive a report showing their electricity usage on an hourly basis during Peak Demand Hours. They can use this to review the effectiveness of their demand reduction plan and make adjustments accordingly, which will also help them earn more rewards in the future.

All eligible business customers can register for this programme to enjoy a host of benefits, including the opportunity to manage their electricity usage during Peak Demand Hours, earn rewards and explore other ways to save energy. Please browse [Peak Demand Management webpage](#) and download Application Form.

<sup>#</sup>Only available for business customers who have installed smart meters and remote meter reading systems
