CLP Smart Energy Award Recognises Industry Decarbonisation Achievements
AI Accelerates Smart Energy Management

CLP Power Hong Kong Limited (CLP Power) today (29 October) organised the 2026 Smart Energy Award presentation ceremony, recognising organisations that have demonstrated excellence in energy management, innovative energy-saving solutions and the application of artificial intelligence (AI). Participating organisations come from a wide range of sectors, including public and commercial organisations, the catering industry, small and medium-sized enterprises, non-governmental organisations and educational institutions. Together, the energy-saving and decarbonisation initiatives implemented by this year's awardees are expected to save around 60 million kilowatt-hours (kWh) of electricity, equivalent to the annual electricity consumption of 20,000 Hong Kong households. The results demonstrate how different sectors of the community are harnessing innovative technologies to enhance energy efficiency and advance Hong Kong's low-carbon transformation.

Chairman of the Council for Carbon Neutrality and Sustainable Development Dr Lam Ching-choi, who officiated at the ceremony, said, "The HKSAR Government's recently announced Hong Kong's First Five-Year Plan and Policy Address have set out a range of decarbonisation and environmental protection measures, providing a clear direction for Hong Kong's green transformation. Achieving carbon neutrality requires the concerted efforts of both the Government and all sectors of the community. I am pleased to see many organisations actively adopting innovative technologies and AI to enhance energy efficiency and reduce energy consumption and carbon emissions in their daily operations. Over the years, CLP Power's Smart Energy Award has brought together innovative energy-saving solutions and best practices from across sectors, setting an example for the wider community and contributing to Hong Kong's carbon neutrality goal."

CLP Power Managing Director Mr Joseph Law said, "AI has become an important tool for businesses in advancing energy saving and decarbonisation. This year, many award-winning organisations have applied AI in areas such as energy demand forecasting, cooling system optimisation, facilities management and predictive maintenance, demonstrating its significant value in unlocking energy-saving potential and enhancing

operational resilience. CLP Power will continue to leverage its power expertise to support businesses in adopting innovative technologies and smart energy management solutions, driving Hong Kong towards a smarter and greener future."
