CLP Renewable Energy Certificates

What is Renewable Energy Certificates?

CLP Renewable Energy Certificates (RECs) offer businesses a simple and flexible option to support clean energy generation and achieve sustainability goals. Each unit of REC represents the environmental attributes of electricity produced by local renewable energy sources. These sources include solar power, wind power, and landfill gas projects, generated or purchased by CLP.

Multiple benefits of our RECs

Support renewable energy in Hong Kong

RECs are an easy, alternative way to support green energy apart from installing a renewable energy system on your premises. With RECs, you can declare you are using renewable energy of your business.

Qualify for the right to claim emission reduction benefits

You can claim the benefits of reducing your company's carbon footprint associated with electricity generated from renewable energy sources.

Enhance your corporate image

Our RECs meet the RE100, CDP (formerly Carbon Disclosure Project) and ESG reporting requirements*. Your company can fulfil the commitment on international business green energy initiatives and contribute to the corporate social responsibility.

Eligibility

All CLP customers are eligible to buy RECs.

Rates

The unit price of REC is based on the price published on our website at the time of purchase or as announced by CLP from time to time. The current pricing for a unit of REC is HK\$0.5, and is available for purchase at a minimum of 100 units.

CLP offers a variety of purchasing options for business customers. You might contact our Account Managers for details.

* Valid in Scope 2 of The Greenhouse Gas Protocol, A Corporate Accounting and Reporting Standard from the World Resources Institute (WRI)/World Business Council for Sustainable Development (WBCSD)

Take action now and build a low-carbon city together!

Customers are welcome to purchase RECs via CLP website:
