

CO ₂ e emissions intensity of all electricity sold by CLP Power Hong Kong to its local customers for 2024 before any RECs sold	For general (non-REC holders) customers' carbon emissions assessment of electricity they consume ⁽¹⁾
0.38 kgCO ₂ e/kWh	0.38 kgCO ₂ e/kWh ⁽²⁾
<p>Formula:</p> $\frac{\text{CO}_2\text{e Emissions from Local Generation Assets in HK}}{\text{Total Electricity Sales in HK}}$	<p>Formula:</p> $\frac{\text{CO}_2\text{e Emissions from Local Generation Assets in HK}}{\text{Total Electricity Sales in HK} - \left[\text{REC Sales in 2024} + / - \text{Carry-forward to the Following and from the Previous Year} \right]}$

Remarks:

(1) The figure has taken into account renewable generation sold in the form of RECs (i.e., environmental attributes) in 2024.

(2) REC holders can make a claim / declare that they reduce 0.38kg of CO₂e for each unit of electricity carried in the REC they purchased.
